DEEP GARNET RECORDS ARTISTS PROMO FOURTHSTATE

All species of garnets possess similar physical properties and crystal forms, but differ in chemical composition. FOURTHSTATE is also known as Schorlomite with the formula $\text{Ca}_3\text{Ti}_4+2(\text{Fe}_3+\text{O}_4)_2(\text{SiO}_4)$. Is sometimes regarded as a titanium-rich variety of Andradite but it is recognized as a distinct mineral species. It's a rare member of the Garnet group and due to his vast titanium content is referred as the "strong and Deep-Tech garnet". His tracks were identified in some caves in Australia and were brought to DEEP GARNET RECORDS laboratories where they're examined carefully by our technicians. Is named "Schorlomite" for its resemblance to ther black Touemaline mineral Schorl. His first DEEP GARNET outcome is the rollin and Deep-Tech beauty of "Dreamvision" which will be priceless in a few years. Watch out for more underground gems by him in the near future
