KErf

All species of garnets possess similar physical properties and crystal forms, but differ in chemical composition. Kerf comes as an oxide mineral with the formula $(\text{Ca,Th,Ce})\text{Zr}(\text{Ti,Nb})_2\text{O}_7$. It occurs as well-formed fine sized isometric crystals. It is a black, brown or yellow mineral with a hardness of 5.5 and a specific gravity of 4.7. It was first discovered in Brazil back in 1895 and it is also found in Canada, United States, Kazakhstan, but due to mysterious circumstances was flourished in Spain. Our technicians identified his rollin Deep-Breaks stuff in Malaga nnd bring them carefully to DEEP GARNET laboratories for further examination. Due to those experiments his remix on PRATO's "Florida Winter" show the light of the day during 2017 while his single "Grid/Memories" caused a lot of buzz in the Deep-Breaks scene. As we dig further and deeper into Malaga's underworld we will identify more of his hidden gems due to be released very soon!

DGR041 PRATO "Florida Winter" (with KErf remix)
